Results-driven aspiring Gen AI and Backend Developer with hands-on experience building intelligent systems, real-time voice agents, and scalable APIs. Proficient in Python for backend development and actively advancing toward more complex and optimized implementations. Experienced in working with open-source local LLMs and developing basic RAG pipelines. Comfortable managing virtual environments and containerizing applications using Docker for deployment. Interested in combining backend development with AI models to build efficient and interactive solutions.

Experience

Emumba **On-site**
Gen AI Backend Developer *Jan 2026 – Mar 2026*
- Developed backend systems using Python and applied advanced prompt engineering to optimize Large Language Model outputs for enterprise applications.
- Engineered Retrieval-Augmented Generation (RAG) pipelines to enhance model accuracy and contextual query answering.
- Collaborated with cross-functional teams to deploy scalable AI features, ensuring low-latency data processing and API integration.

Developers Hub Corporation **Remote**
AI Intern *Mar 2025 – May 2025*
- Developed Python scripts to extract, clean, and format raw data, creating high-quality datasets for testing internal machine learning models.
- Conducted foundational prompt engineering and benchmarked various open-source language models to document performance and response accuracy.
- Built internal UI dashboards and automated scripts to visualize AI outputs and test API endpoints, streamlining day-to-day development tasks.

Technical Skills

- AI & Machine Learning: Local LLMs, RAG Pipelines, Advanced Prompt Engineering, Voice Recognition, Facial Expression Analysis
- Frameworks & Tools: Pipecat, Cartesia, LangChain, OpenAI API, FastAPI
- Backend & Frontend: Python, JavaScript, React.js, Next.js, Node.js, REST APIs, HTML5, CSS3, Tailwind CSS
- Data & Infrastructure: Docker, Docker Hub, Containerization, Virtual Environments, Vector Databases (Pinecone, FAISS), Git

Key Projects

Real-Time Audio & RAG
AI Powered Voice Bot
- Implemented a real-time conversational voice agent using a local LLM, Pipecat, and Cartesia for natural text-to-speech interactions.
- Engineered a RAG pipeline with a vector database to enable the voice bot to answer complex, context-specific queries accurately.
- Managed the project in a virtual environment, containerized the application using Docker, and successfully published the image to Docker Hub for public access.

AI Recruitment Platform
Intervexa - Web-Based Mock Interview System
- Developed an AI-driven interview platform that dynamically tailors technical questions based on the candidate's specific job role and skill set.
- Integrated voice recognition to analyze verbal responses and facial expression capture to monitor candidate confidence during the interview.
- Provided a comprehensive feedback dashboard to help users prepare for real-world interviews effectively.

Agentic Workflows
Multi-Agent Sales System
- Developed agentic workflows using LangChain to automate lead enrichment and outreach processes.
- Integrated LLMs to analyze prospect data and generate personalized content, automatically routing high-intent leads to sales teams.
- Created scalable API endpoints to connect the multi-agent system securely with external CRMs and databases.

Education

BUITEMS **Quetta**
Bachelor of Science in Computer Science, GPA: 3.72/4.00 *Oct 2022 – Present*

Certifications & Workshops

- Web Dev Crash Course: BUITEMS (2025)
- Google AI Essentials (2024)
- Microsoft Learn Student Ambassador (2024)
- Web3 Masterclass: Algorand
- Cybersecurity Workshop (Ignite National Tech Fund)

Leadership

BUITEMS Entrepreneurial Society **Quetta**
Executive Lead *Aug 2024 – Present*
Spearheading initiatives to foster student entrepreneurship and organizing large-scale tech events.
